

BUSINESS SOLUTION

iAssist

Healthcare providers who want a comprehensive platform for specialty therapy initiation choose iAssist.

As the only platform that delivers comprehensive, real-time specialty therapy initiation solutions, iAssist simplifies the process of getting patients on therapy. This advanced platform helps reduce therapy delays, enables patient adherence and gives healthcare providers (HCPs) visibility into the patient journey from prescription through therapy access.

Simplify a complex system. Get better results from care.

“My days are fulfilling but hectic. I really appreciate iAssist for reducing the time and energy needed to help my patients. The more time I have, the more people I can help. Thank you, iAssist!”

iAssist is a Surescripts-certified and HIPAA-compliant platform that offers electronic prescribing for nearly any drug with an NDC. Completely free and cloud-based, iAssist enables HCPs to perform all steps needed to initiate therapy proactively, electronically and all in one place.

Comprehensive Platform Simplifies Therapy Initiation

Our all-in-one, automated solution simplifies the process of getting patients on specialty therapy and streamlines enrollment for patient support—getting patients on therapy faster.

Real-time Solutions Reduce Therapy Delays

Access to real-time benefit information, prior authorizations and immediate eprescription capabilities reduce therapy delays for their patients and support a successful patient journey.

Actionable Insights Speed Access and Improve Adherence

This connected, data-driven solution empowers HCPs to proactively track their patients and support them through real-time visibility into each step of the initiation process.

Simplify a complex system. Get better results from care.

“ *iAssist has become our preferred method for submission across all specialty areas.* **”**

- HCP iAssist User

iAssist delivers the automated solutions that matter most to HCP practices.

eConsent

Electronic capture of patient consent in the office, via email or text message. This improves speed to therapy and ensures patient access to life sciences organization-sponsored support programs.

eSignature

Digital capture and storage of a prescriber's signature allows for easy prescription and form authorization. This improves office efficiency.

ePrescribe

Our Surescripts-certified platform supports eprescribing with structured prescriptions that include dose, quantity, refills and SIG, as well as supportive therapies.

eEnrollment

Capture of patient and HCP information enables proactive enrollment into patient solutions. This tool ensures patients receive timely access to crucial services that support adherence.

Simplify a complex system. Get better results from care.

Advanced Clinical Documentation (ACD)

Patient-specific clinical summary used to facilitate communication between HCPs during a transition of care. Returns comprehensive and critical patient information in real time that drives efficiencies related to Drug Utilization Reviews and PA support.

Advanced Prior Authorization (APA)

Intuitive, automated solution for submitting PAs in near real time—improving processing time from days to minutes. Covering more than 80% of payer-covered lives, APA pulls the appropriate PA form based on the product and patient's plan and prepopulates entered patient and HCP data. Only relevant questions and response options are presented, and fields include validation. APA also facilitates electronic submission of supporting documentation and notes. Payer/PBM decisions include pending, approved, denied or more information requested.

eCoverage Solutions

Advanced Benefit Verification (ABV)

ABV uses just five patient identifiers to pull comprehensive pharmacy benefit coverage information in seconds. Direct connectivity to payers/PBMs powers real-time delivery of payer/PBM name and type; BIN; PCN; member and group IDs; plan type and channel (e.g., commercial, government); effective and term dates; deductible amounts, patient OOP amounts, access restrictions (PA/step edit required) and coverage alerts.

eMedical Benefit Verification (eMedBV)

Using the same five patient identifiers as ABV, as well as provider NPI, and payer and member IDs, eMedBV pulls comprehensive, J-code specific medical benefit details in seconds. Direct connectivity to payers facilitates delivery of accurate, real-time coverage information. Returns include payer/plan name and type; member ID; group ID; relationship; effective and termination dates; family/individual deductible, year to date, per year and remaining; and family/individual OOP, year to date, per year and remaining.

Financial Assistance Access

Real-time access to financial assistance availability, eligibility and enrollment through a single, automated workflow. This reduces paperwork, enables informed decision making and improves timely patient access to therapy.

Patient Services Access

Through a single, automated solution, HCPs may proactively and digitally access additional support services for patients to reduce the back-and-forth and increase speed to therapy.

Advanced Clinical Education (ACE)

Technology-first solution facilitates virtual nurse visits with patients and HCPs. Integrated with the CRM, ACE capabilities include self-serve online scheduling, document upload, product education, injection training, first dose observation and reporting.

Pharmacy and Specialty Pharmacy Selection

Connected to 77,000+ pharmacies through the Surescripts network, this tool allows HCPs to rapidly ePrescribe to the pharmacy or specialty pharmacy of the HCP's or patient's choice—with direct specialty pharmacy integrations to facilitate patient status visibility.

Status Messaging

This tool facilitates up-to-date, actionable patient status information from any source connected to the platform (e.g., specialty pharmacy, copay vendor, hub) to empower informed patient management and support.

Informed access. Improved outcomes.

AssistRx has engineered the perfect blend of tech + talent to provide an advanced therapy initiation and patient support solution to improve patient uptake, visibility and outcomes. Our solution integrates technology and therapy expertise to advance patient therapy in a more efficient and effective manner—delivering informed touchpoints that simplify a complex system to enable better results for today's patients.
